

Mechanical Limit Switch Box

Indicates the open or closed position of the valve in pneumatic rotary actuator valves. Open or closed position information is received by signal. It is used in actuated ball valve, actuated butterfly valve, manual ball valve, manual butterfly valve.

Exproof Switch Box

A box with a direction indicator showing the open or closed position of the actuator (the valve it is attached to) is attached to the top of the Actuator. It performs the function of informing the system by converting the position of the actuator (open-closed) into an electrical signal.

Pneumatic Positioner

Rotary type electro-pneumatic positioners are mechanical type and designed to operate under difficult conditions. Input control signal: 4-20 mA Rotary type, used in both double acting and single acting actuators with minor adjustment.
